Institutional Developmental Plans (IDP)

The Institutional Developmental Plan aims to strengthen the academic, infrastructural, research, and community engagement activities of the institution. It focuses on expanding academic programmes, introducing skill-oriented courses, promoting faculty development and research, improving sports facilities, and increasing student enrolment to ensure the overall growth and excellence of the institution.

Introduction of New Academic Programmes: The institution plans to expand its academic offerings through the introduction of new programmes such as the Integrated Teacher Education Programme (ITEP), Science Stream, Lab Technician course, Bachelor of Pharmacy (B.Pharm), and B.Sc. in Computer Science. These programmes aim to diversify academic opportunities and cater to the growing educational and professional aspirations of students.

Introduction of Add-on Courses: To enhance students' employability and practical skills, the institution proposes to introduce add-on courses in emerging and vocational areas, including Cyber Security, Artificial Intelligence (AI), Fashion and Apparel Design, Music, and Mass Communication. These courses will provide students with additional competencies and career-oriented skills.

Faculty Development and Research: The institution aims to strengthen the professional competencies of faculty members through workshops, seminars, and Faculty Development Programmes (FDPs) in various academic and emerging fields. It also seeks to promote research culture by encouraging faculty and students to undertake minor and major research projects, publish research papers, and contribute to the proposed Christ Journal.

Community Engagement and Outreach: The institution plans to strengthen its social responsibility initiatives through the adoption of schools. This initiative will promote educational outreach, community participation, knowledge sharing, and meaningful engagement with the surrounding communities.

Development of Sports Facilities: The institution plans to improve the existing football field and develop the basketball court to provide better sports infrastructure for students. These improvements aim to encourage greater participation in sports, promote physical fitness, nurture sporting talents, and foster teamwork and overall student development.

Enhancement of Student Enrolment: The institution aims to increase student enrolment through wider admission promotion, outreach programmes, awareness campaigns, and the introduction of diverse academic and skill-based courses. These efforts will help attract students from different backgrounds and strengthen the institution's academic growth and sustainability.

Through these developmental initiatives, the institution aspires to achieve academic excellence, strengthen research and innovation, promote holistic student development, enhance community engagement, and establish itself as a centre of quality higher education.
